Challenge

- Provide completed integrated Digital experience to user.
- Integration of Hardware and develop API to communicate with it.

Technology

- Asp.net MVC
- SQL Server 2012
- Html 5, CSS2, JQuery

Solution

We have developed one web-based application which covers their all requirements for managing co-working space. We have integrated web-based application with hardware for paid internet services and getting printed invoice copies for their members. It is providing all members data and sales reports which help them to analyze the business.

Conclusion

We have successfully delivered and maintaining this cloud-based coworking management application that dramatically eases the everyday administrative tasks to empower space managers, so they can focus on what really matters – time for their coworkers.
